## STELLINGEN

Behorend bij het proefschrift:

### **The Microenvironment of the Inflammatory Type Hepatocellular**

#### **Adenoma**

1. The liver in which the inflammatory type hepatocellular adenoma develops is not normal (This thesis).
2. The remnant liver of resected inflammatory type hepatocellular adenoma harbours foci of potential neoplastic growth (This thesis).
3. Fatty changes in the inflammatory type hepatocellular adenoma are secondary to the fatty constitution of the liver in which the tumor develops (This thesis).
4. The overweight/obese status of the patient contributes to the inflammatory phenotype of the inflammatory type hepatocellular adenoma (This thesis).
5. The ductular reaction in the inflammatory type hepatocellular adenoma is a hepatic-progenitor cell mediated regenerative response (This thesis).
6. Hepatocytes in cytochrome-c-oxidase deficient patches in the inflammatory type hepatocellular adenoma are generated by cells with stem cell properties, residing in the areas of ductular reaction (This thesis).
7. Subclonal expansion in the inflammatory type hepatocellular adenoma is a constitutive process regardless the neoplastic growth (This thesis).
8. Every honest researcher I know admits he's just a professional amateur. He's doing whatever he's doing for the first time. That makes him an amateur. He has sense enough to know that he's going to have a lot of trouble, so that makes him a professional. (Charles Franklin Kettering)
9. Tell a man that there are 300 billion stars in the universe, and he'll believe you... Tell him that a bench has wet paint upon it and he'll have to touch it to be sure. (Murphy's Law)

Jing Han, 2013
